PERSONAL PROJECTS

Food Blog Website(Bono DeliZioso)
- A food blogging platform where users can access recipes and reviews for the dishes.
- A user friendly UI which allows the user to search the dishes and leave reviews when needed.
- An approach to integrate blogging with audience reviews of the recipes.

Research Paper on AI based Fitness Trainer(In Progress)
- In progress of drafting a research paper on integrating AI for the fitness training using modern tech.
- Highlighting how AI can be used to benefit the fitness world and show how it can increase the efficiency when compared to a Human Fitness Trainer.

Flutter project for Workout planner and tracker
- Flutter App for easy tracking and planning of workout to meet the users' goals.
- Calorie goal counter with necessary food and water intake goals to meet the users' need.
- Workout planner with suitable workouts for the user.
- A very convenient , attractive and user friendly User Interface.

Sunlight Tracking System for solar panels
- A working model to demonstrate an approach to maximize energy generation from Solar Panels by actively changing angle of panel.
- The panel is set to always face the direction with maximum intensity of sunlight to provide better productivity from solar energy.
- This provides an efficient and convenient way to harness solar energy.
